united states army combat engineers were not properly trained to conduct their mission during world war ii research of combat engineer training and operations during the interwar period and subsequently in the pacific north african and european theaters revealed the extraordinary efforts required both to train new engineers and to develop selectees into capable combat engineer units this research demonstrates that significant reductions to military personnel levels and readiness during the interwar period required a hasty fielding of forces in wartime that were not trained to previously established standards wartime engineer units consisted of soldiers who did not meet prerequisites for entry into the branch these factors resulted in officers who were not prepared to lead combat engineer operations and soldiers who lacked basic engineering skills to efficiently conduct their missions shortfalls in selection and training often necessitated remedial training in the theaters of operation

this study examines the role of u s army engineers fighting as infantry in airland battle by analyzing the actions of the 1111th engineer combat group during the battle of the bulge in dec 1944 by manning hasty defensive positions at malmedy stavelot and trois ponts the 291st engineers and c company 51st engineers delayed the german advance long enough for 30th infantry and 82d airborne divisions to reach the area and wrestle the initiative from sixth panzer army the defense of the ourthe river line by elements of the 51st engineers was instrumental in delaying 116th panzer division long enough for 3rd armored and 84th infantry divisions to reach defensive positions in front of the meuse river engineers were successful as infantry against mechanized forces for several reasons 1 infantry missions were limited in scope 2 they were augmented with additional fire power 3 they occupied good defensible terrain 4 world war ii engineer units received extensive combat training before deploying overseas the battle of the bulge displays many of the characteristics of a soviet attack on nato like the ardennes in dec 1944 nato s central front is held by units which are overextended untested in combat and locked into a rigid forward defense with limited tactical reserves and no operational reserves under these circumstances if soviet forces do penetrate the main battle area engineer units are likely to be committed as infantry to block

or contain the penetration like the battle of the bulge we can expect a non linear battlefield with fragmented isolated units a battlefield dominated by confusion and uncertainty it is in exactly this type of situation that the actions of a few brave determined men can make the difference between victory and defeat by manning small isolated defensive positions the men of the 1111th engineer group provided the extra measure of combat power that tipped the scales of victory in favor of the allies in dec 1944

for centuries the world has witnessed the development and use of increasingly complex and powerful military systems and technologies in the process the art of war has truly become the art of combined arms warfare in which infantry artillery air support intelligence and other key elements are all coordinated for maximum effect nowhere has this trend been more visible than in the history of twentieth century warfare originally published as an essential in house study for u s army officers during the 1980s this much revised and expanded edition remains the most complete study available on the subject rewritten with a much wider readership in mind it both retains its enormous practical utility for military professionals and provides a valuable and appealing introduction for scholars and general readers jonathan house author of the original work brings the story of combined arms up to the present covering among other things desert storm the war in chechnya and the rise of smart weapons and related technologies he traces the evolution of tactics weapons and organization in five major militaries american british german russian and french over 100 years of warfare revealing both continuities and contrasts within and between these fighting forces he also provides illuminating glimpses of israeli and japanese contributions to combined arms doctrine expanding his insightful analysis of the world wars and the wars in korea and vietnam house also offers much new material focused on the post vietnam period throughout he analyzes such issues as command and control problems of highly centralized organizations the development of special operations forces advances in weapons technology including ballistic and anti ballistic missile systems the trade offs involved in using heavy versus light armed forces and the enduring obstacles to effective cooperation between air and land forces his strong critique of the air superiority propaganda that came out of the gulf war is sure to spark some heated debates rigorously comparative house s study addresses

significant questions about how nations prepare for war learn or don't learn its harsh lessons and adapt to changing times and technologies unique in the annals of the literature on warfare it will be the standard work on this subject for a long time to come

the German Wehrmacht was one of the most capable fighting forces the world has ever known but in the end it was no match for the Allies some historians contend that the Allies achieved victory through brute force and material superiority but as Peter Mansoor argues all of the material produced by US industry was useless without trained soldiers to operate it a coherent doctrine for its use and leaders who could effectively command the formations into which it was organized
